| Course Plan  |  |                 |                      |
| Module   | Contents   | Hours           | Sem. Exam Marks      |
| I  | Introductory concepts: Program Development - Algorithm, Flowchart, Pseudocode, Structured Programming – Program Design, Modular Programming, Structuring of Control Flow.<br>Introduction to C Language: The C character set, identifiers and keywords, data types, constants, variables and arrays, declarations, expressions, statements, Symbolic Constants, Library Functions. | 8               | 10%                  |
| II   | Operators and expressions: Arithmetic operators, Unary operators, Relational and Logical operators, Assignment operators, Conditional operator.<br>Data input and output: Single character input, single character output, scanf, printf, puts, gets, functions, interactive programming.  | 8               | 10%                  |
| <b>FIRST INTERNAL EXAMINATION</b>  |  |                 |                      |

|  |   |    |     |
|--|---|----|-----|
| III  | Control statements: Branching - if else statement, Looping, nested control structure, switch statement, break statement, continue statement, comma operator, go to statement.<br>Functions: Overview, function prototypes, passing arguments to a function, recursion.<br>Program structure: Storage classes, automatic variables, external variables, static variables, multi file program, Library files, Header files. | 12 | 20% |
| IV   | Arrays: Defining an array, passing array to functions, multidimensional arrays.<br>Strings: Defining a string, Null Character, Initialization, Reading, writing and processing a string.<br>Structures and unions: Defining a structure, processing a structure, user defined data types, structure and pointers*, passing structure to function*, self-referential structures*, union.                                   | 9  | 20% |
| V  | Pointers: Fundamentals, Declaration, Passing pointers to a function, pointers and one dimensional arrays, dynamic memory allocation, operations on pointers, pointers and multidimensional arrays, array of pointers, Array of strings, pointers and variable length arguments list, passing functions to other functions.  | 9  | 20% |
| <b>SECOND INTERNAL EXAMINATION</b>   |   |    |     |
| VI   | File Handling: opening and closing a data file, reading and writing a data file, processing a data file, unformatted data file, Random accessing.<br>Low level programming: Register variable, bitwise operations, bit fields.<br>Additional features of C: Enumeration, Command line parameters, Macros, C Preprocessor.   | 9  | 20% |
| <b>END SEMESTER EXAM</b>   |   |    |     |
| <b>QUESTION PAPER PATTERN</b>  |   |    |     |
| <p>There will be two parts in the Question paper - <b>Part A and Part B.</b></p> <p><b>Part A</b> will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.</p> <p><b>Part B</b> will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in <b>Part B</b> to be limited to 2.</p> <p>The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.</p> |   |    |     |

*\*May be covered after Module V*

| <b>Course Plan</b>   |   |                 |                      |
| Module   | Contents  | Hours           | Sem. Exam Marks      |
| <b>I</b>   | <b>Basic Structures</b> - Sets, Set Operations, Relations, Classification of relations, Equivalence Relations, Closures of Relations, Matrix Representation of Relations, Partial Ordering, n-ary Relations, Functions.<br><b>Relevant Portions from Text 2 primarily and Text 1 for additional reference</b> | 9               | 15%                  |
| <b>II</b>  | Division Algorithm, GCD, Primes, Euclidean Algorithm, Congruences, Properties of Congruences, Solutions of Linear Congruences, Chinese Remainder Theorem.<br><b>Text 3: 2.2, 2.3, 2.4, 4.2, 4.4 and Text 1 for additional reference</b>   | 9               | 15%                  |

| FIRST INTERNAL EXAMINATION   |   |    |     |
|--|---|----|-----|
| III  | Permutations, Circular Permutations, Combinations, Combinations with repetition, Binomial Theorem, Pigeonhole Principle, Principle of Inclusion and exclusion<br><b>Text 4: 1.2, 1.3, 5.5, 8.1 and Text 1 for additional reference</b>  | 9  | 15% |
| IV   | Generalization of Principle of Inclusion and Exclusion, First Order Linear Recurrence Relation, Second Order Linear homogeneous Recurrence Relations with Constant coefficients, Non Homogeneous Recurrence Relation, Divide-and-Conquer Algorithms and Recurrence Relations<br><b>Text 4: 8.3, 10.1, 10.2, 10.3 and Text 1 for additional reference</b>  | 9  | 15% |
| V  | Graphs and Graph Models, Graph Terminology and Special Types of Graphs, Representing Graphs and Graph Isomorphism, Connectivity, Euler and Hamilton Paths, Shortest-Path Problems, Planar Graphs, Graph Coloring<br><br>Graphs, Directed Graph, Multigraph, Connected graph, Graph Isomorphism, Euler circuit and trail, Fleury's Algorithm, Planar and NonPlanar Graphs, Bipartite Graph, Kuratowski's Theorem(without proof), Cut-set, Hamilton path and cycle.<br><b>Text 4: 11.1, 11.2, 11.3, 11.4, 11.5 and Text 1 for additional reference</b><br><b>(proof of theorems 11.6, 11.8 and 11.9 are not required)</b> | 10 | 20% |
| SECOND INTERNAL EXAMINATION  |   |    |     |
| VI   | <b>Logic</b> - Propositional Logic, Applications of Propositional Logic, Propositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of inference.<br><b>Text 1</b>   | 10 | 20% |
| END SEMESTER EXAM  |   |    |     |
| QUESTION PAPER PATTERN   |   |    |     |
| <p>There will be two parts in the Question paper - <b>Part A and Part B.</b></p> <p><b>Part A</b> will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.</p> <p><b>Part B</b> will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in <b>Part B</b> to be limited to 2.</p> <p>The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.</p> |   |    |     |

| Module  | Contents   | Hours           | Sem. Exam Marks      |
| I   | Introduction to Statistics and Data, Types of Data - Quantitative Data, Qualitative Data, Logical Data, Multivariate Data etc. Features of Data distributions - Center, Spread, Shape, Symmetry, Skewness and Kurtosis (Definitions only), Stem and Leaf Diagrams, Frequency Distributions and Histogram, Measures of Center - Mean, Median, Mode, Measures of Spread - Range, Variance, Standard Deviation, Interquartile range, Measures of Relative Position: Quartiles, Percentiles. | 8               | 15%                  |

|  |   |    |     |
|--|---|----|-----|
| <b>II</b>  | Introduction to Probability Theory - Classical empirical and subjective probabilities, Random Experiments, Sample Spaces & Events, Axioms of Probability, Addition Rules, Conditional Probability, Multiplication and Total Probability Rules, Independence, Bayes's Theorem (without proof).   | 8  | 15% |
| <b>FIRST INTERNAL EXAMINATION</b>  |   |    |     |
| <b>III</b>   | Random Variables, Discrete Random Variables, Probability Distributions and Probability Mass Functions, Mean and Variance of a Discrete Random Variable, Discrete Uniform Distribution - Mean and Variance, Binomial Distribution - Mean and Variance, Geometric Distribution - Mean and Variance, Poisson Distribution - Mean and Variance.   | 10 | 20% |
| <b>IV</b>  | Continuous Random Variables, Probability Distributions and Probability Density Functions, Mean and Variance of a Continuous Random Variable, Continuous Uniform Distribution, Mean and Variance, Normal Distribution, Mean and Variance (Proof not required), Standard Normal Distribution, Joint and Marginal Probability Distributions, Conditional Probability Distributions, Independent Random Variables.  | 10 | 20% |
| <b>V</b>   | Statistical Inference, Types of sampling and sampling error, Random Sample & Statistic, Sampling Distribution, Central Limit Theorem (Statement Only), Distribution of sample mean and sample variance, $t, \chi^2 \wedge F$ distributions (derivation not required), Confidence Interval on the Mean, Confidence Interval on the Variance, Confidence Interval for a Population Proportion, Confidence Interval on the Difference in Means, Confidence Interval on the Ratio of two Variances. | 10 | 20% |
| <b>SECOND INTERNAL EXAMINATION</b>   |   |    |     |
| <b>VI</b>  | Hypothesis Testing, General Procedure for Hypothesis Tests, Tests on the Mean, Tests on a population Proportion, Tests on the Difference in Means.  | 8  | 10% |
| <b>END SEMESTER EXAM</b>   |   |    |     |
| <b>QUESTION PAPER PATTERN</b>  |   |    |     |

| <b>Course Plan</b>  |  |                 |                      |
| Ex. No  | Exercises/Experiments  |                 |                      |
| 1   | Visualizing Data<br>Tables, charts and plots. Visualising Measures of Central Tendency, Variation, and Shape. Box plots, Pareto diagrams. How to find the mean median standard deviation and quantiles of a set of observations.<br>Students may experiment with real as well as artificial data sets.   |                 |                      |
| 2   | Probability Distributions.<br>Set operations, simulation of various properties. Bays' rule. Generate and Visualize Discrete and continuous distributions using the statistical environment. Demonstration of CDF and PDF uniform and normal, binomial Poisson distributions. Students are expected to generate artificial data using the chosen statistical environment and explore various distribution and its properties. Various parameter changes may be studied. |                 |                      |
| 3   | Random samples.<br>How to generate random numbers. Study how to select a random sample with replacement from normal and uniform distribution. Students can use the built in functions to explore random sample selection.  |                 |                      |

|                          |   |
|--------------------------|---|
| 4                        | Study of binomial distribution. Plots of density and distribution functions. Normal approximation to the Binomial distribution. Central limit theorem   |
| 5                        | Study of confidence intervals. How to compute confidence intervals for the mean when the standard deviation is known.   |
| 6                        | How to perform tests of hypotheses about the mean when the variance is known.<br>How to compute the p-value. Explore the connection between the critical region, the test statistic, and the p-value.   |
| 7                        | How to find quartiles of the t-distribution. How to perform a significance test for testing the mean of a population with unknown standard deviation.   |
| 8                        | Compare populations means from two Normal distributions with unknown variance<br>Tests of Hypotheses for One Proportion<br>Tests of Hypotheses for Comparing Two Proportions  |
| 9                        | How to calculate the correlation between two variables. How to make scatter plots. Use the scatterplot to investigate the relationship between two variables  |
| 10                       | Find the least-squares regression line. How to calculate and plot the residuals   |
|                          | <p><i>Note : This laboratory is to be conducted with a suitable statistical software. The colleges can choose the statistical software. Some of the suggested environments are R, SciPy, SPSS Excel, or any other statistical analysis software depending on availability.</i></p> <p><i>The students are expected to write code for statistical applications using the chosen environment. The instructor may choose a standard data set and ask the students to work with it.</i></p> |

| <b>Course Plan</b>  |  |                 |                      |
| Module  | Contents   | Hours           | Sem. Exam Marks      |
| <b>I</b>  | Introduction: Need for OOP paradigm, Procedural approach vs. Object-Oriented approach. Object Oriented concepts<br>Java Basics: History of Java, Java features, data types, variables, operators, expressions, control statements, type conversion and casting, Concepts of - classes, objects, constructors, Access Specifiers (public, private, protected, friendly), Access Modifiers (static, final, abstract, native, synchronized), overloading methods, recursion, nested and inner classes | 9               | 20%                  |
| <b>II</b>   | Inheritance: Generalizations vs. Specialization, Inheriting data members and methods, Single and Multilevel inheritance, use of super and this keywords.<br>Polymorphism- method overriding, dynamic method dispatch, abstract and final classes   | 10              | 20%                  |
| <b>FIRST INTERNAL EXAMINATION</b>   |  |                 |                      |

|  |  |    |     |
|--|--|----|-----|
| <b>III</b>   | Arrays and Strings: One dimensional arrays, Multidimensional arrays, exploring String class and methods, String Buffer class.<br>Interface: creation and implementation of an Interface.<br>Packages - creating and accessing a package, importing packages, creating user defined packages                                | 8  | 15% |
| <b>IV</b>  | Exception Handling: benefits of exception handling, exception hierarchy, usage of try, catch, throw, throws and finally, built-in exceptions, creating own exception sub classes.<br>Multithreaded Programming: thread life cycle, creating threads, thread priorities, synchronizing threads, Inter Thread Communication. | 9  | 15% |
| <b>V</b>   | Exploring Java I/O, Streams, Byte Streams, Character Streams, Random Access Files, Object Streams.   | 10 | 15% |
| <b>SECOND INTERNAL EXAMINATION</b>   |  |    |     |
| <b>VI</b>  | Applets – Applets and Applications, life cycle of an applet, passing parameters to an applet, HTML tags.<br>Working with Graphics, Colors.<br>Networking: client-server model, Sockets, Inlet Address, TCP sockets – Server Socket and Socket classes, UDP Sockets – Datagram Socket, Datagram Packets.                    | 10 | 15% |
| <b>END SEMESTER EXAM</b>   |  |    |     |
| <b>QUESTION PAPER PATTERN</b>  |  |    |     |
| <p>There will be two parts in the Question paper - <b>Part A and Part B.</b><br/> <b>Part A</b> will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.<br/> <b>Part B</b> will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in <b>Part B</b> to be limited to 2.<br/> The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.</p> |  |    |     |

| RLMCA108   | OPERATIONS RESEARCH   | 3-1-0-4         | 2016                 |
| <b>Course Objectives</b> <ul style="list-style-type: none"> <li>To introduce Operations research as a tool used to solve decision making problems in a wide range of areas.</li> <li>To impart different modeling techniques of real world problems and the various optimization techniques for solving these models.</li> </ul>   |   |                 |                      |
| <b>Syllabus</b><br>Linear Programming model and various methods for solving the models- The transportation and assignment problems - Probabilistic models - game theory and queuing theory. Simulation models - the virtual running of a real world problem.   |   |                 |                      |
| <b>Expected Outcome</b><br>The students will be able to <ol style="list-style-type: none"> <li>Construct a mathematical model of a real world problem which has many alternative solutions which makes the decision maker unable to take a decision.</li> <li>Learn about various optimization methods that are employed to solve these mathematical models to find a solution which is in the best interest of the decision maker.</li> </ol> |   |                 |                      |
| <b>References</b> <ol style="list-style-type: none"> <li>Hamdy A.Taha, "Operations Research-An Introduction", Prentice Hall of India</li> <li>Kanti Swarup, P.K.Gupta and Man Mohan "Operations Research", Sultan Chand (2010).</li> <li>Ravindran, Philips and Solberg, Wiley., "Operations Research", Second edition (2007), Wiley.</li> </ol>   |   |                 |                      |
| <b>Course Plan</b>   |   |                 |                      |
| Module   | Contents  | Hours           | Sem. Exam Marks      |
| <b>I</b>   | Introduction to O.R-Modeling in O.R -Solution methods for O.R- Methodology of O.R<br>Linear Programming Problem-Formulation-Graphical method-Simplex method-Big M method-Two phase method.  | 8               | 15%                  |
| <b>II</b>  | Duality in LPP-Statement of Duality theorems-Statement of complementary slackness theorem<br>Solving LPP using duality-Dual simplex method.   | 9               | 15%                  |
| <b>FIRST INTERNAL EXAMINATION</b>  |   |                 |                      |
| <b>III</b>   | Transportation problem-Methods to find initial basic feasible solution-Northwest corner rule-Matrix minima method-Vogel's Approximation method.<br>Solving a TP -MODI method -Degeneracy in TP- Unbalanced TP-Maximization in TP Assignment problem- Hungarian method of assignment-Maximization in assignment problem. | 9               | 15%                  |
| <b>IV</b>  | Game Theory-Two person zero sum game-Basic notions-saddle point-Maximin-Minimax principle.<br>Games without saddle point-Mixed strategies-Algebraic method for solving two person zero sum game-Graphical method for 2xn and mx2 games-Dominance principle-Solving mxn game -using dominance-LPP method.                | 9               | 15%                  |

|  |   |    |     |
|--|---|----|-----|
| <b>V</b>   | Queuing theory-Elements of a queuing system-Kendall's notation-Operating characteristics-Poisson process-Exponential distribution-mean and variance-Birth and death process.<br>Queuing models based on Poisson process-Single server models with finite and infinite capacity-Multi server models with finite and infinite capacity. | 11 | 20% |
| <b>SECOND INTERNAL EXAMINATION</b>   |   |    |     |
| <b>VI</b>  | Simulation-Methodology of Simulation-Simulation models-Event type simulation-Generation of Random numbers.<br>Multiplication congruence algorithm-Inverse transformation method-Monte-Carlo simulation-Simulation of a queuing system.  | 10 | 20% |
| <b>END SEMESTER EXAM</b>   |   |    |     |
| <b>QUESTION PAPER PATTERN</b>  |   |    |     |
| <p>There will be two parts in the Question paper - <b>Part A and Part B.</b></p> <p><b>Part A</b> will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.</p> <p><b>Part B</b> will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in <b>Part B</b> to be limited to 2.</p> <p>The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.</p> |   |    |     |

| Module   | Contents   | Hours           | Sem. Exam Marks      |
| I  | Introduction to Software Engineering - What is Software Engineering - Why is software engineering important, Details around requirements gathering, Software design, Development, Testing, Deployment, Maintenance. Planning phase – project planning objective, software scope, empirical estimation, models, COCOMO, staffing and personal planning. | 9               | 15%                  |
| II   | Software Engineering models - Predictive software engineering models and its application - Model Approaches – Prerequisites - predictive and adaptive waterfall - waterfall with feedback - Sashimi - incremental waterfall - V model -  | 8               | 20%                  |

|  |   |    |     |
|--|---|----|-----|
|  | System development life cycle - Iterative vs Predictive – prototypes - Spiral - unified process - Cleanroom - Rapid Application development principles – risk management.   |    |     |
| <b>FIRST INTERNAL EXAMINATION</b>  |   |    |     |
| <b>III</b>   | <p>Fundamentals of Agile Development - Introduction to agility, Agile Principles, Overview of Scrum, Extreme Programming, Feature Driven development, Lean Software Development, Agile project management.</p> <p>Design and development practices in Agile projects, Test Driven Development, Continuous Integration, Refactoring, Pair Programming, Simple Design, User Stories, Agile Testing, Agile Tools - Agile design practices, Role of design Principles including Single Responsibility Principle, Open Closed Principle, Liskov Substitution Principle, Interface Segregation Principles, Dependency Inversion Principle in Agile Design, Need and significance of Refactoring, Refactoring Techniques.</p> <p>The Agile lifecycle and its impact on testing, Test-Driven Development (TDD), JUnit framework and tools for TDD, Testing user stories - acceptance tests and scenarios, Planning and managing testing cycle, Exploratory testing, Risk based testing, Regression tests, Test Automation, Tools to support the Agile tester.</p> | 11 | 20% |
| <b>IV</b>  | Scrum Framework - Introduction to Scrum, Project phases, Agile Estimation, Planning game, Product backlog, Sprint backlog, Iteration planning, User story definition, Characteristics and content of user stories, Acceptance tests and Verifying stories, Project velocity, Burn down chart, Sprint planning and retrospective Daily scrum, Scrum roles - Product Owner, Scrum Master, Scrum Team, Scrum case study, Tools for Agile project management  | 8  | 15% |
| <b>V</b>   | Pragmatic Programming in Software Engineering - Essential pragmatism in software engineering - Code maintainability - design by contract - assertive programming - Writing maintainable code - Ruthless testing – pride.  | 9  | 15% |
| <b>SECOND INTERNAL EXAMINATION</b>   |   |    |     |
| <b>VI</b>  | Industry Trends - Introduction to DevOps - A unified process between development and operations - Continuous Integration (CI), continuous testing, and continuous deployment - Configuration management, release management, and monitoring and learning  | 8  | 15% |
| <b>END SEMESTER EXAM</b>   |   |    |     |
| <b>QUESTION PAPER PATTERN</b>  |   |    |     |
| <p>There will be two parts in the Question paper - <b>Part A and Part B.</b></p> <p><b>Part A</b> will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M). There will be no choice questions.</p> <p><b>Part B</b> will have 6 essay questions one from each module of 6 marks each, with an alternative choice question from the same module (6 x 6M=36M). The maximum number of sub part questions in <b>Part B</b> to be limited to 2.</p> <p>The total marks assigned to questions in Part A (Short answer) and Part B (Essay) together from a single module will not exceed the marks assigned to that module specified in the course plan.</p> |   |    |     |

| <b>Exercises</b>  |              |                 |                      |
| The Students can do their practical in the following areas in any of the DBMS like <a href="#">MySQL</a> , <a href="#">Oracle</a> , <a href="#">MongoDB</a> etc..   |              |                 |                      |
| <ol style="list-style-type: none"> <li>Table Design- Using foreign key and Normalization</li> <li>Practice SQL Data Definition Language(DDL) commands             <ol style="list-style-type: none"> <li>Table creation and alteration (include integrity constraints such as primary key, referential integrity constraints, check, unique and null constraints both column and table level)</li> </ol> </li> </ol>  |              |                 |                      |

3. Practice SQL Data Manipulation Language (DML) commands
  - a. Row insertion, deletion and updating
  - b. Retrieval of data
    - I. Simple select query
    - II. Sub query (returning single row, multiple rows, more than one column)
    - III. Joining tables
4. Practice Transaction Control Language (TCL) commands (Grant, revoke, commit, rollback and save point options)
5. Development of sample applications using Oracle/ MySql / MongoDB as back end. Sample applications may include
  - I. Payroll Information
  - II. Student Information System
  - III. Bank Transaction
  - IV. Library Information System etc.
6. Develop programs using Triggers, Stored procedures

| <b>Syllabus</b><br>This is a companion Course for the ‘RLMCA305 Web Programming’   |                            |                 |                      |
| <b>Expected Outcome</b><br>The students will be able to: <ol style="list-style-type: none"> <li>Explore markup languages features and create interactive web pages using them.</li> <li>Learn and design Client side validation using scripting languages.</li> <li>Acquire knowledge about Open source JavaScript libraries.</li> <li>Design front end web page and connect to the back end databases.</li> <li>Do Client-side &amp; Server-side scripting</li> <li>Develop Web Applications</li> </ol>   |                            |                 |                      |
| <b>References</b> <ol style="list-style-type: none"> <li>Text Books prescribed for theory course ‘RLMCA305 Web Programming’</li> </ol> <p style="text-align: center;"><b>Web resources</b></p> <ol style="list-style-type: none"> <li><a href="http://php.net/manual/">http://php.net/manual/</a></li> </ol>   |                            |                 |                      |
| <b>Experiments/Exercises</b>   |                            |                 |                      |
| <ol style="list-style-type: none"> <li>Create a web page with the following using HTML5             <ol style="list-style-type: none"> <li>To embed an image map in a web page</li> <li>To fix the hot spots</li> <li>Show all the related information when the hot spots are clicked.</li> </ol> </li> <li>Create a web page with all types of Cascading style sheets.</li> <li>Implement Client Side Scripts for Validating Web Form Controls using JavaScript.</li> <li>Designing Quiz Application Personal Information System using JavaScript</li> <li>Develop PHP program using Arrays, control structures, looping structures and Form Handling</li> <li>Implement Web applications using HTML and JSP/PHP/ASP and deploy.</li> <li>Using PHP and MySQL, develop a program to accept book information viz. Accession number, title, authors, edition and publisher from a web page and store the information in a database and to search for a book with the title specified by the user and to display the search results with proper headings.</li> <li>Develop a web application for Airline Reservation System using PHP</li> </ol> |                            |                 |                      |

8. Programs for creating dynamic and interactive web pages using forms.
9. Test the application on an Application Server.

*Note : Students can be given a group micro project, so that they learn to work in a team environment. They can also be trained on project management tools.*

| <b>Administration Level</b><br>Introduction to Shell scripting – Experiment with shell scripts mainly for administrative tasks like user creation in bulk, changing file permissions recursively, creating files in bulk, deleting folders and sub folders etc... <ol style="list-style-type: none"> <li>Commands             <ol style="list-style-type: none"> <li>echo, read</li> <li>more, less</li> <li>man</li> <li>chmod, chown</li> <li>cd, mkdir, pwd, ls, find</li> <li>cat, mv, cp, rm</li> <li>wc, cut, paste</li> <li>head, tail, grep, expr</li> <li>Redirections &amp; Piping</li> <li>useradd, usermod, userdel, passwd</li> <li>tar</li> </ol> </li> <li>Scripting             <ol style="list-style-type: none"> <li>Environment variables</li> <li>If statement</li> <li>For statement</li> <li>While statement</li> </ol> </li> <li>Remote access             <ol style="list-style-type: none"> <li>ssh, scp, ssh-keygen, ssh-copy-id</li> </ol> </li> <li>Scheduling Using cron and at</li> </ol> |                   |                 |                      |
| <b>Experiments to supplement RLMCA202 - Application Development and Maintenance</b>   |                   |                 |                      |

**GIT**

1. git init - Initializing an empty git repository  
git init --bare
2. git status - Knowing the status of your repository
3. git add <artifact> Staging/Adding artifacts(files) to repository  
{3.1 git status}\*
  4. git commit -m "Message for the commit" - Details on how to commit changes to the local repository
5. git add <pattern> - Bulk adding/staging artifacts to repository  
{5.1 git commit -m "Commit the changes"}\*
6. git log - Git Activity logs
7. git remote add <origin\_name> <remote repository URL> - Attaching a remote repository  
<remote repository URL> - username@127.0.0.1:/path/to/repository
8. git push -u <origin\_name> <branch> (git push -u origin master) -Pushing to the master
9. git pull origin master - Pulling from a master
10. git diff options
11. resetting a staged/added file.
12. git checkout
13. git branch <branch\_name> - Creating the branches
14. git checkout <branch\_name> - switching between branches
15. git rm 'pattern' - removing the files/artifacts  
{15.1 commit to the branch}\*  
{15.2 Switch back to the master}\*
16. git merge <branch\_name> - Merging the contents.
17. git branch -d <branch\_name> - Removing a branch
18. git push - Syncing with the remote repository
19. git stash - Park your changes in directory.
20. git stash apply - Applying the changes back (git stash options)
21. git rebase - Reapply commits on top of another base tip

*\* Steps that are repeated for completing the exercise*

**Students should be encouraged to do all the subsequent experiments in a GIT repository.**

**Network Programming (Java/C)**

1. Implement Bidirectional Client-Server communication using TCP.
2. Implement Echo Server using TCP
3. Implement Chat Server using UDP.

2. <http://www.learnerstv.com/Free-Computer-Science-Video-lectures-ltv046-Page1.htm>

| Course Plan         |  |                |  |
|---------------------|--|----------------|--|
| Module              | Contents   | Hours Allotted | % of marks in End-Semester Examination |
| I                   | Basic concepts in Computer Graphics - Types of Graphic Devices - Video Display Devices-Graphic monitors and Workstations, Interactive Graphic inputs-Hard Copy Devices-Graphic Software - Basic Raster Scan - Random Scan Systems - Line Drawing Algorithms - Circle Generation Algorithms - Scan Conversion - solid area scan conversion - polygon filling. | 9              | 20                                     |
| II                  | Two dimensional transformations - Homogeneous coordinate systems - matrix formulation and concatenation of transformations - Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; window -to-viewport coordinate transformation; clipping operations – point, line, and polygon clipping algorithms                               | 9              | 20                                     |
| FIRST INTERNAL EXAM |  |                |  |
| III                 | Introduction to graphics in three dimension, Three dimensional object representations – Polygon surfaces- Polygon tables- Plane equations – Polygon meshes- Curved Lines and surfaces- Quadric surfaces- Blobby objects.   | 8              | 15                                     |
| IV                  | Three dimensional viewing – viewing pipeline, viewing coordinates, Projections, Vanishing points, Clipping-Graphical User Interfaces. Introduction to multimedia systems.  | 8              | 15                                     |
| V                   | Spline representations – introduction to Bezier curves and surfaces -B-Spline curves and surfaces - 3D transformations - Translation, Rotation, Scaling, composite transformations.  | 8              | 15                                     |

| SECOND INTERNAL EXAM   |  |          |           |
|------------------------|--|----------|-----------|
| <b>VI</b>              | Hidden surface elimination- z-buffer algorithms, area based algorithms.<br>Light sources – basic illumination models -Properties of light-Lighting,<br>Radiosity, Raytracing-Shading   | <b>8</b> | <b>15</b> |
| END SEMESTER EXAM      |  |          |           |
| QUESTION PAPER PATTERN |  |          |           |
|                        | <p>There will be two parts in the Question paper - Part A and Part B.</p> <p>Part A will have 8 short answer questions of 3 marks each (8 X 3 M = 24 M).<br/>There will be no choice questions.</p> <p>Part B will have 6 essay questions one from each module of 6 marks each, with<br/>an alternative choice question from the same module (6 x 6M=36M).The<br/>maximum number of sub part questions in Part B to be limited to 2.</p> <p>The total marks assigned to questions in Part A (Short answer) and Part B (Essay)<br/>together from a single module, not to exceed the marks assigned to that module<br/>specified in the course plan in the syllabus.</p> |          |           |

| RLMCA341  | SEMINAR     | 0-0-2-2       | 2016                 |
| <b>Course Objectives</b>  |             |               |                      |
| To enable the students to gain knowledge in any of the technically relevant current topics on computer science/information technology/research, and acquire the confidence in presenting the topic and preparing a report.  |             |               |                      |
| <b>Syllabus</b>   |             |               |                      |
| <b><u>Guidelines</u></b>  |             |               |                      |
| The student shall undertake detailed study on a technically relevant current topic in computer science/information technology under the supervision of a faculty member, by referring articles published in reputed journals/conference proceedings. Each student has to submit a seminar report, based on these papers; the report must not be reproduction of any original paper. The topic shall be presented in the class taking a duration of 15-20 minutes. |             |               |                      |
| The report and slides for presentation shall be prepared using free typesetting software such as LATEX. A committee consisting of three/four faculty members shall evaluate the seminar presentation.   |             |               |                      |
| Following guidelines shall be used for the assessment of Seminar.   |             |               |                      |
| Scope and relevance of topic – 20%  |             |               |                      |
| Quality of presentation slides – 10%  |             |               |                      |
| Presentation skills – 30%   |             |               |                      |
| Knowledge in the topic – 20%  |             |               |                      |
| Report – 20%  |             |               |                      |

| Week | Schedule   |
|------|--|
| I    | Familiarisation with build tools.<br>Familiarisation with an IDE (Eclipse, NetBeans,...), that support build tools and git.<br>Selection of Topic, Formation of Development Team, Feasibility analysis.  |
| II   | Topic Approval, Meeting of Development Team including Scrum Master with Product Owner.<br>Informal, preliminary discussions of requirements. Creating user stories in the rough record.<br>Commencement of the Project.  |
| III  | Identifying modules, Initial Design of Database & UI. Starting Test Driven Development.<br>Creating an empty git repository by Scrum Master / one member of the Development team.<br>Setting permission to other members. Pushing the first version of the Project along with a Readme file containing contact details of team members.<br>Using Branch for individual members. Merging with Master. |
| IV   | First Scrum Review.<br>(Here onwards, the Scrum reviews are conducted on every other week)   |
| VII  | Project Presentation - Interim<br>Evaluation to be based on Git History  |
| XIII | Project Presentation - Final<br>Evaluation to be based on Git History  |
| XIV  | Submission of Project Report, with Rough Record  |

| RLMCA352  | PROJECT AND VIVA-VOCE | 0-0-30-12     | 2016                 |
| <p style="text-align: center;"><b>Course Objectives</b></p> <ul style="list-style-type: none"> <li>● To apply the software engineering principles on a real software project</li> <li>● Develop a software product using the Agile methodology.</li> </ul>  |                       |               |                      |
| <p><b>Note:</b></p> <p><i>Identify Real projects - Any project useful to the Society. The project must be done in house. The student has to spent the time in the lab for project work. Attendance as per MCA regulations is applicable for appearing for the final viva-voce. However the evaluation committee can give consent to students in exceptional cases to do their project in Industry which has real live projects. Local industries and training Institutes which offer live projects should not be permitted.</i></p> <p><i>Students, individually have to do a project approved by their faculty Supervisor. Project evaluation weights shall be as follows:-For convenience the marks are allotted as follows.</i></p> <p><i>Project Progress evaluation details</i></p> <ul style="list-style-type: none"> <li>● <i>Total Marks for the Final Project: 100</i></li> <li>● <i>Project evaluation by the supervisor/s : 30 Marks</i></li> <li>● <i>Presentation &amp; evaluation by the Committee : 40 Marks</i></li> <li>● <i>Evaluation by the External expert : 30 Marks</i></li> </ul> <p><i>The project assessment board shall consist of the following members.</i></p> <ul style="list-style-type: none"> <li>❖ <i>Chairman: Head of the Department</i></li> <li>❖ <i>Members: Project supervisor/s of the student</i></li> <li>❖ <i>One faculty member from the Department</i></li> <li>❖ <i>One faculty member from a sister Department</i></li> <li>❖ <i>An external expert, either from an academic/research institute or Industry</i></li> </ul> <p><i>A faculty/technical staff should act as the Scrum Master of each Project team. The Customer or a Senior faculty is the Product Owner.</i></p> <p><i>Frequent meetings are highly encouraged, at the convenience of the Scrum Master. Should not exceed 15 minutes. Ensure meetings once in three days. A sprint is two weeks, so ensure biweekly reviews. A review should not exceed 30 minutes. A demo to the Product Owner is compulsory in each review.</i></p> <p><i>Use git for Version control.</i></p> |                       |               |                      |

*Follow Test Driven Development. Bugzilla or an equivalent tool may be used for bug tracking.*

*The student should keep a rough record. Divide it into 4 parts. Product Backlog, Database & UI Design, Testing & Validation and details of Versions. Make dated entries to the corresponding part, as the project progresses. The Corrections and comments from Product Owner/Scrum Master should be clearly indicated with the Date.*

*Project presentations may be conducted for Internal Assessment. They should also serve as supplement to Scrum reviews. The evaluation board may consist of other faculty members/technical staff. A maximum of 2 Presentations are allowed. Scrum reviews should not be sacrificed for presentations.*

*Students must be encouraged to publish their work in journals and due credit to be given to the students for this.*

*Latex or an equivalent tool should be used for preparing Presentations and Project Report.*
